<h1><center>ANIMALS</center></h1>

<HR><BR>

<h2>Animals both large and small are a critical component to our
environment. Domesticated animals, such as livestock, provide us
food, fiber and leather. Wild animals, including birds, fish, insects and
pollinators, are important to support the web of activity in a functioning ecosystem. </h2>

<h5>Types of animals</h5>

<ul>

<li>Carnivores</li>

<li>Omnivores</li>

<li> Herbivores</li>

</ul>

<hr><br>

<p2>Carnivores</p2><BR>Carnivores are animals that eat
only meat.Sometimes carnivores are called predators. Organisms that
carnivores hunt are called prey. Carnivores are a major part
of the food web, a description of which organisms eat which
other organisms in the wild.<br>Many carnivores
get their energy and nutrients by eating herbivores, omnivores, and other carnivores. <br></p>

<hr><br>

<p1>Omnivores</p1>

<p> Omnivores are a diverse group of animals. Examples of omnivores include
bears, birds, dogs, raccoons, foxes, certain insects, and even humans. Animals
```

that hunt other animals are known as predators, while those that are hunted are known as prey. Since omnivores hunt and are hunted, they can be both predators and prey.</p>

<hr>

<dl>

<p3>Herbivores</p3>

<p>Herbivorous animals are the animals that feed on plants and fruits. Cows, buffaloes, goats, deer are some of the herbivorous animals. Herbivorous animals that feed on fruits are called frugivores, that feed on leaves are folivores while that feed on nectar are called nectivores.</p>
